Art Unit: 2822

Claims 1-17 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Zommer (6091086), cited by Applicant.

Zommer teaches the standare IGBT power device with a double scribe line diffusion at the periphery of the active region with a first upper portion having a first depth and a second lower portion having a second depth greater than the first depth. Zommer achieves this as taught in column 6 by using a double implant of B from the top and Al from the bottom. The Al's faster diffusion rate achieves the claimed structure. From the drawings it is apparent that the first depth is about 50% of the second depth.
